

CommonTime mSuite

The complete mobile computing solution for your entire workforce.

Complete Mobile Computing

CommonTime's Mobile Enterprise Application Platform (MEAP), mSuite, provides organizations with a complete mobile computing solution, from full Centralized Mobile Management to Mobile Applications and Messaging & Collaboration tools.

mSuite maintains a truly device agnostic approach, allowing enterprises to freely manage the expectations and the needs of their mobile users.

Centralized Mobile Management

Centralized Mobile Management provides the backbone framework to deliver and manage the functionality of Messaging & Collaboration and Mobile Applications.

The management of users, policies and handheld devices is administered through this framework, as is the over-the-air deployment of software updates, patches and new applications. CommonTime also provides extensive monitoring and reporting capabilities through Centralized Mobile Management to provide cost-effective quality of service for the end-user.

Messaging and Collaboration

CommonTime's Messaging & Collaboration gives the mobile worker access to their email, messaging, contacts, calendar, tasks and notes whilst on the move, providing the same functionality as if working from the office.

Mobile Applications

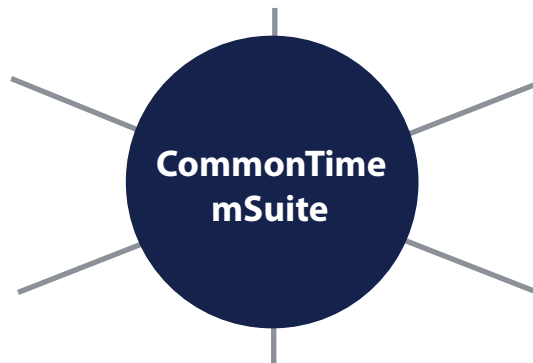

CommonTime's library of mobile applications support many of today's critical business processes. Our mobile applications such as mField Service, mRental, mInspection, mCRM, and mLone Worker provide an out of the box, comprehensive and integrated user experience for mobile field workers.

mSuite's line of business applications are supported by our leading process design environment, mDesign Studio. mDesign Studio enables business process owners to create, modify, and manage their own mobile applications and processes. This approach to mobile computing ensures a low total cost of ownership, and a rapid return on investment by minimizing the time to market of mobile applications.

mSuite: Device Agnostic

Mobile devices will change; your Mobile Enterprise Application Platform shouldn't have to.

CommonTime mSuite: Features and Functionality
